

Innovations 2021

We have enhanced the proven terrafina® aluminium substructure system for you. Our product innovations make the assembly even simpler and faster. They furthermore offer new, interesting technical solutions as well. Let's have a look at the major highlights:

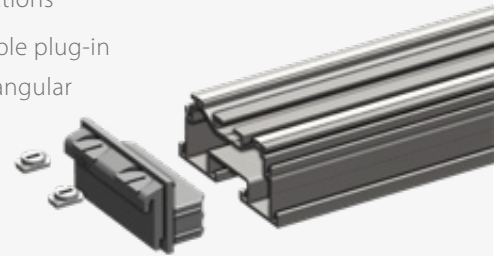

Innovative substructure profiles

- New double substructure (160 x 35 mm) to enable a better fixing in edge and joint areas resp. for the assembly of the new terrafina® lounge SUPERSIZE
- New high aluminium substructure (80 x 80 mm)

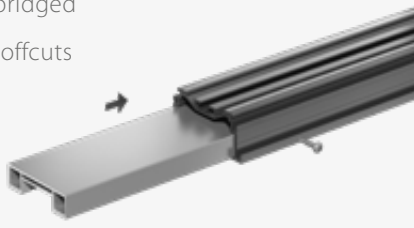

Innovative plug-in connectors

- Patent pending plug-in connectors ensure an extremely fast and simple assembly of aluminium frame constructions
- New variable plug-in connector for angular constructions

Handy profile connectors

- New profile connector to enable a seamless combination of different aluminium substructure profiles. By this e. g. different heights can be compensated for or cable ducts can be bridged
- The processing of offcuts is also facilitated

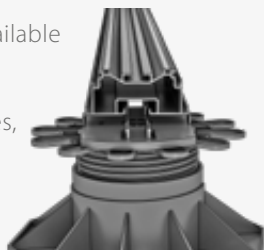

New substructure fixed lengths

- Special substructure fixed lengths (173.2 cm and 294.5 cm) to enable a modular arrangement and construction of terrace areas
- This reduces the planning and cutting efforts on the building site

Optimised clip-on adjustable feet

- 4 new adjustable feet
From 25 to 40 mm / from 35 to 70 mm
From 65 to 155 mm / from 145 to 225 mm
- All adjustable feet are now available as clip-on feet
- By the variable top plate slopes, irregularities and unevenness can be compensated for by up to 8°

Constructive improvement of the start profile and the cover attachment

- By the constructive change of the profile geometry the parts can now simply be put on the substructure. The screwing on is no longer necessary
